

COMPACTGRAIN

The LEADER in Multi-Layer Abrasives

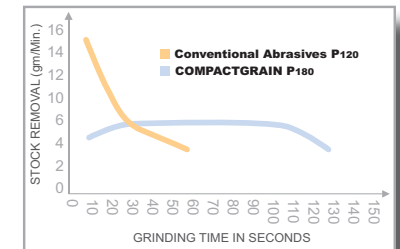

COMPACTGRAIN provides a uniform finish. Unlike conventional abrasives that dull quickly, COMPACTGRAIN provides a consistent finish over an extended period of time.

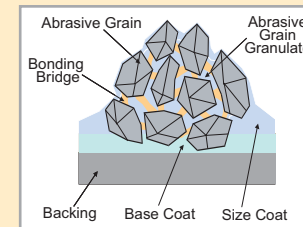

SURFACE FINISH

COMPACTGRAIN is truly a unique product because it provides consistent stock removal throughout the life cycle of the product. COMPACTGRAIN was designed so that it regenerates granulates and exposes new, sharp edges.

COMPACTGRAIN is engineered with a unique resin bonded granulate construction that is more resilient than conventional abrasives.

The unique granulate construction is what sets COMPACTGRAIN apart from the competition. This technique molds the abrasive grains and bonds them together using VSM's exclusive resins.

The granulates are designed to break down at the optimum moment, releasing a dulled grain and exposing a new, sharp grain regenerating itself multiple times.

PRODUCTS

VSM's extensive COMPACTGRAIN product line can accommodate a wide range of applications including flat or round polishing, robotic polishing of contoured parts, hand polishing of common carbon steels, and polishing heat sensitive metals such as titanium and cobalt.

Whatever the application, VSM has a product to meet your needs.

HOW TO ORDER:

Please contact your local VSM sales representative.
