

# Ceramic Grain

## Resin Fiber Discs

Ceramic Resin Fiber Discs in both standard and top-sized products are available in 4 1/2", 5", 7", and 9 1/4" diameters.

## What makes VSM's Ceramic the BEST Choice?

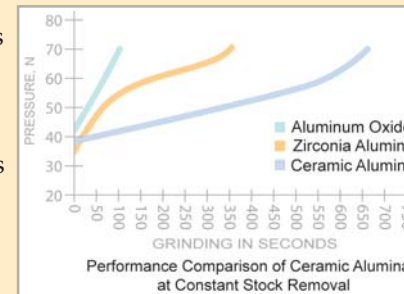

VSM's Ceramic Grain is a self-sharpening grain, engineered to provide an aggressive cut and produce higher rates of stock removal than conventional grains.

Combikorn Construction - A unique coating process developed by VSM's R & D staff. This unique process provides the ceramic grain with a firm support structure for easy grain regeneration.

- ▶ *The Choice for Metal Grinding*
- ▶ Higher Cut Rate
- ▶ Long-lasting Grain Reduces Operating Costs
- ▶ Unique Combikorn Construction

VSM's Ceramic Grain product has the reputation of being the toughest, longest-lasting metal removal product on the market today. Compared to other conventional grain products that immediately lose aggressiveness once grinding begins, the ceramic abrasive maintains its cut rate without needing significant additional pressure (see chart). This constant cut rate reduces grinding time, resulting in less operator fatigue, while increasing productivity and reducing abrasive costs.

## PRODUCTS

VSM's ceramic products are available in a variety of backings from flexible to extremely durable. This backing range allows customers to use VSM products from robotic applications to the most severe plunge grinding applications.

Standard products are available with and without grinding aids for use on all types of metals.

## HOW TO ORDER:

Please contact your local VSM sales representative.
