

QUALITY ABRASIVES

# VSM High performance fibre discs

SPECIALS

PRODUCTS

APPLICATIONS

# VSM High performance fibre discs in operation

## Application examples:

- Smoothing out or polishing welded seams
- Deburring operations of cast parts
- Evening out welded seams, spot weldings and braze-sections
- Edge and surface grinding
- Grinding down imperfections
- Smoothing and polishing

# Your benefit:

## Aggressive stock removal

- because of the grain's **excellent cutting properties** (particularly with the self-sharpening ceramic and zirconia alumina series)
- because of perfect coating and special coating technique

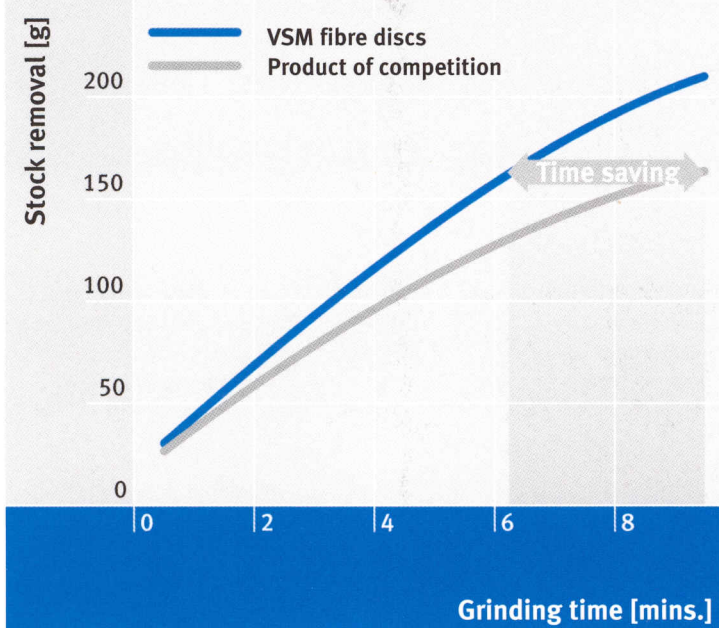

## Very long service life

- because **grain bonds superbly** with backing material
- because of **self-sharpening grain** when grinding (ceramic, zirconia alumina and compactgrain)
- because of the additional layer (in TOP SIZE products)

## Excellent surface quality

- because of totally **smooth operation**
- because of **special shapes** (e.g. rosette shape) due to special edge flexibility
- because of **thickness of the fibre disc which matches the grains**

Example:  
Processing welding spots

# VSM fibre disc holders

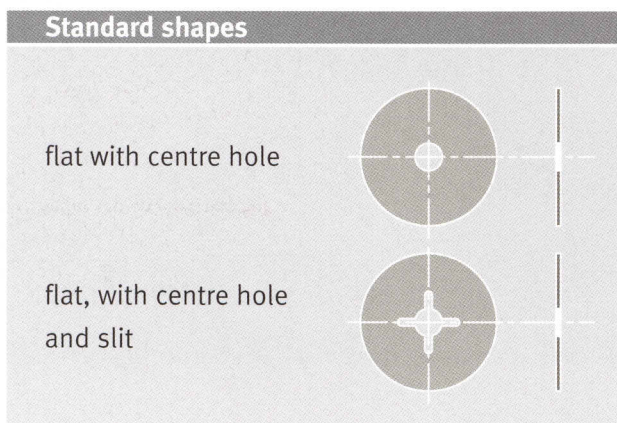

For storing discs up to  $\varnothing$  235 mm with centre hole of  $\varnothing$  22 mm.

- tightly fixed preventing fibre disc distorting
- fibre discs kept tidily at the workplace

Consists of:

- 1 x bottom plate with fixing holes (1)
- 1 x top plate (2)
- 1 x spindle (3)
- 1 x hand knob (4)

## Dimensions and fibre disc shapes

### Standard dimensions [mm]

100	16
115	22
125	22
150	22
180	22

# High-tech fibre discs: structure and self-sharpening process of the grain

## CERAMIC GRAIN (CER)

- high level of stock removal
- long service life
- continuous self-sharpening
- cool grinding
- for hard workpieces

## ZIRCONIA ALUMINA (ZA)

- high level of stock removal
- long service life
- continuous self-sharpening

## COMPACTGRAIN (COM)

- even stock removal
- fine surfaces
- continuous self-sharpening
- consistent surface roughness during its entire service life

# High-quality fibre discs: grain structure

## SILICON CARBIDE (SiC)

- very hard
- ideal for grinding glass, minerals, ceramics, china, stone, titanium, varnishes, brass, bronze and steel (especially steel sheets)

## ALUMINIUM OXIDE (AlO)

- very hard and sufficiently tough
- universal grain for grinding metals

## ADDITIONAL LAYER (TOP SIZE)

- for cooler grinding
- for higher cutting rate

Organization for the  
Safety of Abrasives

As an OSA member (Organisation for the Promotion of Safe Grinding Products), we are committed to complying with European CEN standards (for grinding products based on CEN standard prEN 13743:1999). We also subject our products to other, more rigorous testing specifications, thereby contributing to accident prevention and industrial safety in the user's manufacturing operation. For more information on the OSA, please ask for our information brochure from your VSM sales outlet.
